

COMMUNITY MANIFESTO

DAO365 x eModulus

*Autonomous Settlement in the Digital Age
Community Manifesto*

Version:	v1.0-PUBLIC
Date:	2026-04-28
Status:	Public Release

We live in an era where humanity's greatest wealth -- knowledge, decisions and lived experience -- is stored on someone else's server. Your home thermostat sends data to Amazon. Your health app -- to Google. Your child's learning data -- to an EdTech startup that may or may not exist in three years. When a supplier goes bankrupt, changes its pricing, or simply decides to shut down -- your data disappears. Your smart home becomes a brick. Your experience becomes someone else's profit.

This is not dystopia. This is today's reality. And it has a name: the Silent Rewrite -- when a system changes your data without your knowledge or consent.

In 2023-2024, one of the world's largest technology corporations, while deploying its cloud infrastructure, generated 340,000 duplicate files in a single decision, destroyed three workstations and halted a developing startup. Without warning. Without compensation. Without the ability to reverse the damage. From that experience DAO365 was born -- not as revenge, but as an answer.

WHAT WE OFFER

A HOME THAT BELONGS TO YOU -- DOWN TO THE LAST BYTE

M-2450 is not only a physical modular home (though it is also that -- certified, transportable, 8-week production cycle). It is a Node -- a place of life with its own brain.

In every home runs a local server with the DAO365 operating system. It governs your energy, water, heating, security -- entirely autonomously. No cloud service. No monthly fee. No supplier who can "switch off" your home. And most importantly -- no corporate algorithm deciding what to do with your data.

Your home's data lives in your home. Full stop.

A COMMUNITY THAT LEARNS TOGETHER -- WITHOUT SHARING IDENTITY

DAO365 homes connect into a settlement network -- a Swarm. Eight residential modules around one engineering centre form an organic cluster (we call it the Octopus -- after the most decentralised organism in nature). Homes share collective experience: how to heat more efficiently in winter, how to save energy in summer, how to optimise ventilation against real weather data. But your personal data -- temperature preferences, life rhythm, family routine -- never leaves your home.

This is the fundamental difference from smart home platforms: they demand your privacy in exchange for comfort. We provide comfort without the exchange.

QUALITY GROUNDED IN PHYSICS, NOT PROMISES

Every manufacturer wishing to produce HomeChain(TM) certified modules must pass an independent hygrothermal simulation (Delphin 6.1.7, TU Dresden) with 1,860 material physics parameters. The result is recorded in an immutable audit log -- a manufacturer cannot "buy" a better result. This is physics, not marketing.

Our first wall assembly passed 6 out of 6 tests to DIN 4108-3 and WTA 6.3 standards. U-value 0.116 W/m²K -- nearly double the required standard. Warmer in winter, cooler in summer, and never -- mould.

DIGITAL TWIN -- YOUR KNOWLEDGE LEGACY

Here begins something the world has not yet offered.

Every DAO365 Node accumulates over time a reflection of your lived experience -- not secret surveillance, but conscious knowledge gathering. How you solved problems. What choices you made and why. What you learnt from mistakes. What values you passed to your children not in words, but in actions.

This is the Digital Twin -- not a copy, but a reflection. And it belongs to you. Not to a platform, not to a corporation. To you and your family. Transferable, inheritable, never migrated to corporate clouds.

When you are gone -- your descendants will be able not only to remember, but to ask. Not a language model pretending to be you, but a structured knowledge field in which lives your decision logic, your value system, your life experience. With cryptographic proof that this is genuinely yours -- not generated, not fabricated.

HOW IT WORKS IN PRACTICE

YOUR LIFE GOALS -- NOT A CORPORATE ALGORITHM

Every Node member has their own Goal Diamond -- a personal knowledge map that helps track life goals through the community ecosystem. This is not an app sending push notifications. It is a deeper structure: the system learns from your daily decisions and helps you see patterns you may not notice yourself. And it does this locally -- your data never travels.

KNOWLEDGE DISTILLATION -- NOT INFORMATION NOISE

DAO365 has an integrated knowledge distillation engine -- a system that separates true signal from noise. When you receive information from the internet, from AI assistants, from partners -- the system automatically evaluates: is this reliable? Is this useful to you? Does this align with community values? Useful information passes through and integrates. Questionable -- sent to you for review. Dangerous -- blocked and stored as immune memory.

This works like the human body's immune system -- not actively seeking threats (that would mean constant stress), but recognising them automatically, silently and efficiently.

MEMBERSHIP GROUNDED IN PHYSICAL CONTRIBUTION, NOT MONEY

DAO365 community membership operates on the Proof of Node principle: you become a member by physically connecting your validated M-2450 module to the Swarm network. Not by paying a membership fee, not by buying tokens. One home -- one vote. The wealthiest member cannot hold more than 5% of voting power.

PROTECTION THAT CANNOT BE BOUGHT

HomeChain AISBL -- a Belgian-registered non-profit association -- is the community's Soul Guardian. It holds one, but absolute, power: the right of Veto. If anyone -- an investor, a corporation, even the founder -- attempted to sell member data, move the system to a centralised cloud, or lower privacy standards -- AISBL stops it. With a single word. Without appeal.

Even if eModulus OU were purchased for a billion -- your home's brain, your Digital Twin, your community experience remain untouchable. Because they belong not to a company, but to you and the community.

This is a promise born from pain. And turned into a legal shield.

PRACTICAL COMMUNITY BENEFITS

Energy Independence -- Every cluster (8 homes + engineering centre) has its own energy system: solar panels, batteries, CHP generator. Can be registered as an official Renewable Energy Community.

Natural Comfort Without Compromise -- Hempcrete walls naturally regulate humidity (MBV 2.0-2.4), create a sterile alkaline environment (pH > 12, zero mould), and actively absorb CO₂ (110-165 kg/m³).

Community Forum and Self-Governance -- Matrix/Element real-time communication + forum for discussions, decisions and votes. Three governance tiers. The human always has the final word.

Exodus -- The Right to Leave -- At any time you can export all your data and relocate. Your experience never becomes "locked" in one system.

WHO WE ARE

We are engineers, an architect, farmers, programmers -- people who decided that their homes, their data and their experience must belong to them. Not on principle, but from experience.

The first community members are already here: in Lithuania, Norway, Iceland. The first demonstration cluster stands in Vilnius, Metropolis Street.

We are not building utopia. We are building practice -- homes that are good to live in, that belong to you, and that grow smarter every day. Not because of an algorithm -- because of the community.

HOW TO JOIN

- Come and feel -- demonstration cluster at Metropolis St., Vilnius. Experience the microclimate difference in person.
 - Configure your home -- emodulus.run 3D configurator. Choose size, materials, energy solution. Get a real price.
 - Become a Node -- when your M-2450 module is connected -- you are a community member. One
-

home, one vote. Your Digital Twin begins to grow.

- Share and learn -- community forum, collective experience, Swarm optimisations. Your privacy remains untouchable.

"Nature has no central server. Every tree, every fungal network, every octopus tentacle operates autonomously -- and that is precisely why life survives any crisis. We build homes on the same principle."
